

EduVision - Learn Without Limits

Problem

- Over 285 million visually impaired individuals struggle with inaccessible educational content.
- Printed textbooks and handwritten notes remain a major hurdle.
- Traditional tools like Braille or manual audio readers are slow, costly, and not scalable.
- There is no affordable, real-time, AI-powered solution that supports independent learning across formats.

Our Solution – EduVision

An intelligent, browser-based AI assistant that instantly:

-  Extracts text from various file types including PDFs, DOCX, PPT, PPTX, PNG, JPEG, and TXT
-  Summarizes and pulls out key learning points
-  Speaks it out loud using natural-sounding voice

No install. No sign-in. Just upload — and learn.

Tech Behind EduVision

- Streamlit – Lightning-fast, accessible UI
- Tesseract OCR – Vision to Text pipeline
- SpaCy + TextRank – Keyword + Summary engine
- gTTS – Converts text to smooth audio
- Python – End-to-End orchestration
- Streamlit Cloud + GitHub – Fully deployed & open-source

Social Impact

- Democratizes education for the visually impaired.
- Enables self-paced learning without external help.
- Built for low-resource settings — just needs a phone & internet.
- Empowers inclusive education — can be used by teachers for ALL students.

Why EduVision is a Game-Changer

- True Multimodal Accessibility: Handles PDFs, DOCX, PPT, PPTX, PNG, JPEG, and TXT files
- Instant + Free: One click, one second, no installs or sign-ins

- Purpose-Built: Not just another AI tool — crafted to solve real problems for visually impaired learners
- Scalable by Design: Already live. Open-source. Plug-and-play for schools, libraries, and learning centers worldwide
